PROFILE

I'm Josh, residing in the province of Leyte. With 2 years of freelancing experience in video editing and 1.4 years of full-time work as a web developer at Sun Asterisk Philippines, I possess expertise in Fullstack application development, web design, and video editing. I excel at working under pressure, am highly adaptable in various situations, and demonstrate flexibility in my job. Consider hiring me for your needs!

WORK EXPERIENCE

October 2023

JR. WEB DEVELOPER

Sun Asterisk Philippines • Full Time / Cebu City, Philippines

July 2022

FREELANCE VIDEO EDITOR

Upwork • Freelancer

I freelanced with a top-rated video editor on Upwork from September 2020 to July 2022, exclusively using Premiere Pro. We created diverse content for international clients, including motivational and topic-based videos. Some videos I edited reached millions of views, filling me with pride. Working closely with clients and honing my Premiere Pro skills was a fulfilling experience.

September 2020

DATA ENCODER

Conversion Technologies, Inc. - ZM (CTI-ZM) • Contractual / Quezon City, Philippines

August 2019

After college, I worked in Manila as a Data Encoder from August 2019 to September 2020. I achieved a 95% accuracy rate, entering data at over 80 words per minute. This honed my skills in fast and precise data entry, handling large volumes of information with meticulous care.

PERSONAL PROJECTS

2023

MEME ME

Powered with Next.js, TypeScript, Tailwindcss, NestJs, Graphql, React Query, Prisma and PostgreSQL

I was inspired to replicate features from popular social media sites like TikTok, Facebook, Instagram, and Twitter, which led me to create my own social media platform. This project includes features such as user login, registration, posting with pictures, infinite scrolling in feeds, the ability to follow and unfollow users, comment on posts, and view user profiles. The project is currently ongoing.

2023

SUN* HRIS PROJECT

Powered with Next.js, TypeScript, Tailwindcss, Dotnet Graphql and MSSQL

This is an internal project at Sun Asterisk Philippines where we pioneered the use of backend technology with dotnet GraphQL and HotChocolate, coupled with frontend development using Next.js, TypeScript, and Tailwind CSS. The system allows users to log in with their company Google email, record daily time in and time out, request leave with specific roles and permissions for approval, and more.
